NECIP YOLCU

Completed several projects using React.js and Node.js

Having more than three years of experience on developing variety applications.

Passionate about developing websites using React.js-Node.js-Next.js-SQL-NoSQL-Prisma-JavaScript-TypeScript and constantly striving to improve my skills.

Experience

Full Stack Developer, **RAsoft** (remote**)** – June 2022 – present
- **First Project:** https://www.rasoft.dev/ -
  - Developed portfolio website
- **Second Project:** https://www.pys.rasoft.com.tr/
  - Created dashboard to simplify management of products (fetching, adding, editing) in any e-commerce websites
  - Developed an application for better communication between customers and designers:
    - Users can create/edit products by uploading images in bulk and update their e-commerce websites
    - Customers upload their products with photos, designers make them ready, then customers choose the best designs for their needs designers share them in customers' social media
- **Third Project: Catering Project – ongoing**
  - Enabling employees to choose their own meals
- **Software:** Javascript, React.js, Next.js, Node.js, MongoDB-PostgreSQL, Cloudinary, Multer, Jest

Software Engineer: Web Developer – 07/2021 to – 06/2022
- Developing websites (1 for magazine, 3 for e-commerce)
- Managing an e-commerce website,
- **Software:** Wordpress, Html, Css, Php, Photoshop
  bemolgiyim.com, lalehome.com, medipekfashion.com

Software Engineer: Desktop & Mobile Developer – 06/2020 to 01/2021
- Developed desktop & mobile application for Camera Streaming
- IP Camera and Android Camera streaming and image processing on it
- Choosing android camera or external any IP camera for the input frame
- Having an OpenCV processing for detecting motion or face
- Counting the number of people as input and output
- **Software:** for Desktop App: Python, Wxpython
  for Android App: Java, Android Studio

R&D Engineer - 08/2018 to 09/2019, **GCS Test Denetim**
- Developed desktop application using Python.
- Detail visualized tracking data of car movement (with GPS antenna and module mounted on car) for both real-time and offline analysis.
- Mapped of current or entire location data using OpenStreetMap
- **Software**: Python, wxpython, Data Visualization, OOP

Education & Projects

Bachelor of Science: **Aerospace Engineering** – 2016
Istanbul Technical University, Istanbul (3.02/4)
Project: Vision Based Autonomous Landing of an UAV
- Found a suitable place for landing of UAV, autonomously which is specified with the image processing algorithms.
- **Hardware-Software:** Drone, Raspberry Pi, Camera, Python, Ardupilot, OpenCV

Certificates

- PostgreSQL Essential Training (LinkedIn Learning)
  https://www.linkedin.com/learning/certificates/29828461fe98f270dd1b696cbf302263368343b84 1915ddc28785b03bdf754c2
- Learning TypeScript (LinkedIn Learning)
  https://www.linkedin.com/learning/certificates/e7d9d370c4a98f9ea64ee7218b4e02a81181505c b50b49e84b75869a8a8710ae
